

My Tree

Presented by the
Canadian Forest Service (CFS)

Looking for the
perfect tree to
plant for your
outdoor
planting project?

My Tree is a free app developed by the Canadian Forest Service (CFS) that can assist you in selecting the right tree to plant for your location. You can customize your search results by:

- plant hardiness zone limit
- location
- tree type (coniferous or deciduous)
- soil moisture
- light requirements
- autumn leaf colour
- preference for native or introduced species

The app includes information on more than

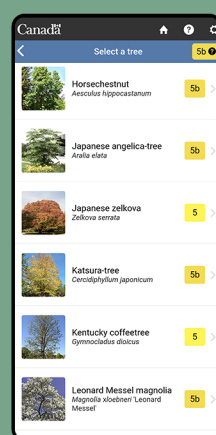

180

native and introduced tree species and their
colour-coded hardiness zones

A **hardiness zone** is a geographic area in which climate conditions allow various types of plants to grow. The app uses the **hardiness zone map** developed by the Government of Canada to help you determine the right tree to plant for your climate.

Download the app

You can download My Tree from the [Government of Canada's Mobile Centre](#) for any operating system, or directly from the app stores for [iOS](#) (iPhone/iPod Touch and iPad) or [Android](#).
